# THE CABLE TRAY SYSTEM

The SILTEC cable tray system is a product, developed for optimum functionality and with focus on simplicity and accessibility, to ensure thorough cleaning and heat release.

The open construction thus prevents build-up of inflammable dust, minimises breeding ground for germs and limits heating of the cables.

Furthermore the system is very easy to work with during mounting and later expansion.

The Siltec cable tray system is a long-term quality product, manufactured from high quality steel, which prevents corrosion and yields an exceptional chemical resistance.

The Siltec cable tray system is suitable for

- the food industry
- chemical industry
- machine equipment works
- offices and computer environments
- cable installation in general

The cable trays are delivered in lengths of 3 m. The width varies from 25 mm to 600 mm and the height from 25 mm to 125 mm.

Cable trays in user-specified sizes can be made on order.

All cable trays are manufactured from rounded materials, which are gentle to cables and tubes.

The cable tray with locking is a patented innovation. The cables are accessible for cleaning, but are secured in the trays.

- Suitable for soft wires and tubes.
- Wires are plait-fixed in the trays without using tools.
- Quick and easy cleaning.
- Suitable for places, where frequent rewiring is needed.
- Suitable for machines and constructions, where high mounting flexibility for cables and trays are needed.
- Suitable for quick servicing. It is easy to follow the wire and replace it.

The open cable tray ensures accessible installations and provides the means to carry many cables in small areas.

The Siltec cable tray system is delivered in 3 qualities:

- Stainless steel
- Hot-dip galvanized
- Electroplated

Siltec solves your problems regarding transportation of energy in cables - simply, effectively and environmentally safe.

# A SIMPLE, YET VERY FLEXIBLE CABLING SYSTEM

## Mounting racks and separators

SILTEC can supply a complete programme of mounting kits for tube lightning, switches, joints etc., special separators for separating AC from DC supply, for regulation and all-purpose bends.

See the Product information booklet, pages 4 and 5.

## Special racks

For all cable trays we can supply special racks, made from stainless steel, to be welded or mounted with screws.

The stainless steel mountings are designed, so that they have only minimal vertical touchpoints to walls and/or machines. This also ensures a sufficient distance between the cable tray and wall/machine, to ease cleaning and sanitation.

See the Product information booklet, page 7.

## Planning

The system itself consists of only a few parts, which makes it simple to mount and maintain.

From a standard cable tray, you can make angles, T's and bends of any kind. This ensures a minimum of individual components.

All obstacles are easily bypassed, using the SILTEC system.

This is why it is easy and quick to project even very big projects.

See the Product information booklet, pages 6 and 7, which contains tables of the estimated component usage.

## Mounting

You only need very few tools to mount the SILTEC system.

It is very easy to produce bends and angles. These are made on-spot from

standard cable trays without the need of special tools.

Vertical bends are made in the same way, by cutting out grids. Diversions are made in the same way as T's.

See the mounting instructions in the Product information booklet, pages 10 and 11.

## Assembly and mounting

We supply a full range of parts for assembly and mounting of all types of cable trays.

See the product information booklet, pages 2 and 3.

# SILTEC CABLE TRAY SYSTEM

Horizontal and vertical bends can be made from standard cable trays, which simplifies mounting and lowers costs of components.

Siltec cable trays are suitable for both thick and thin cables.

A grid-spacing of 45 x 86 mm ensures good support and ample room for fixation.

# SILTEC HEAVY-DUTY CABLE TRAYS

SILTEC heavy-duty cable trays are made with zigzagging longitudinal wires and double side and bottom wires, a combination that ensures a heavy load capacity.

With a console spacing of 3000 mm the tray can handle a point load of 200 kg without sustaining damage, which means e.g. that it can support the

weight of a person walking on the tray. The tray is three times stronger than a traditional wire tray, i.e. a strength similar to a cable ladder:

T's, bends, and angles can be made in the same easy and fast way as with traditional cable trays. All fittings for assembly and installation are the same as used for the traditional wire tray.

Angle consoles and suspensions are made in a heavier construction.

SILTEC heavy-duty cable trays are produced in widths from 100 to 600 mm in hot-dip galvanized, and stainless, acid-resistant steel.

# SANITATION IN PRODUCTION FOOD INDUSTRY

Higher and higher demands are made to the sanitation in the food industry. Hidden and bundled cables form the ideal environment for unwanted bacteria, and collect dust, dirt and moisture.

That is why it is important to run the cables in a way that ensures a flow of air between them and makes cleaning easy.

SILTEC cable tray systems are - due to the open construction - the ideal solution to these problems.

Cleaning and inspection can be done anywhere.

# SANITATION IN PRODUCTION FOOD INDUSTRY

Cleaning and  
inspection can be  
done anywhere.

# THE CABLING SYSTEM WITH UN-THOUGHT-OF POSSIBILITIES

Siltec cable holders made of synthetic material separate and hold wires and cables with diameters of

50 x 50 mm  
75 x 75 mm  
100 x 100 mm  
125 x 125 mm

in layers in the cable trays.

The holders ensure good order; good looks, and an optimal possibility of cleaning, inspection, and heat release.

Furthermore, it is easy to replace the individual cables.

Kindly note that the cable holders can be used repeatedly.

Siltec cable holders eliminate the many cavities and pockets created when wires are tied together with strips.

# WIRE SANITATION IN OFFICES AND COMPUTER ENVIRONMENTS

With the SILTEC cable trays it is easy to mount and dismount cables and cords. If the cable is too long, and you don't want to shorten it, just wind it back and forth, until it fits.

Note, that the plug is accesible at all times.

## BEFORE

We all know the mess that loose-hanging cords can create.

## AFTER

This is how simple and discreet things can be done. And it's easy to dismount the cables. No more stumbling over cables, and cleaning is much easier, without the risk of damaging the installations.

Siltec CPU-tray in a flexible and functional design ensures practical and individual placement of the CPU. By using the Siltec CPU-tray and cable trays you obtain: better control of your cabling, easier cleaning, more room, better safety

## SILTEC CABLE TRAY FOR SINGLE CABLE

Siltec cable tray for a single cable is especially suitable when conveying a single cable to motors, switches, etc.

Furthermore, it is very flexible when bends and changes of direction are necessary.

Installation brackets in stainless steel are available for welding and fastening with screws, and the range includes plastic installation brackets as well.

The cable tray is available with different eye-sizes to suit the thickness of the cable used.

## THE SIMPLE SYSTEM... ... FOR MULTI-PURPOSE SOLUTIONS

For the Siltec cable trays you can get assembly kits, so that you can use the trays for shelves, advertising stands, exhibition booths etc.

**SILTEC** engineers and produces cable tray systems with a focus on simplicity and sanitation.

The **SILTEC** systems solve problems with transportation of energy in difficult environments.

**SILTEC** is a service-minded supplier of quality systems that put your wiring and cables in order and provide a safe and orderly work-environment for the industry and office sectors.
