Processing equipment

An extensive range of grids, wire grates, wire baskets, carts and other custommade solutions, with focus on handling and processing. This could involve, for instance, high-quality hygienic equipment for heat treatment, boiling, pasteurisation, freezing, thawing, smoking, etc. We are specialised in a whole range of areas, including:

- Meat
- Fish
- Dairy
- Pharmaceutical

NTF is supplier to the world's leading smoking oven manufacturers and manufacturers of boiling units.

Wire grates & wire baskets

Frame constructions for wire grates and baskets are made durable and easy to clean. Optimal air and water flow is ensured through a combination of round steel and net.

- Long product life
- Guaranteed optimum efficiency in the processing process
- Savings in the cleaning process
- Individual solutions

Solutions in pressed wire netting

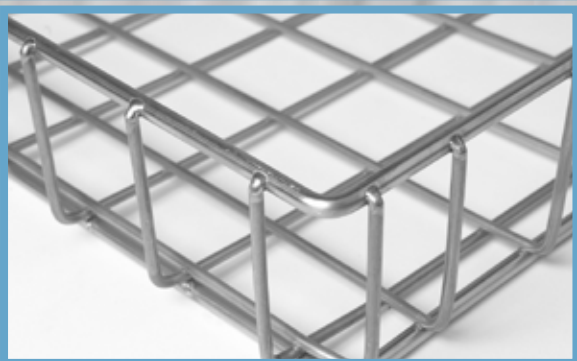

The advantage in using pressed wire netting for wire grates and wire baskets is the even surface and the minimum waste. As the wires are woven you also obtain a strong net suitable for relatively rough handling.

Solutions with welded net/spot-welding in general

Welded net is used when there are special requirements of the net or when pressed wire netting is not suitable for the job. NTF has modern equipment that ensures spot-welds and which fully lives up to the food industries strict requirements for robustness and easy-to-clean.

- Optimal hygienic design
- Individual adaptations
- Effective production process and thus no unnecessary expenses for the customer

Stacking solutions

Baskets and trays can be produced with stacking option. NTF can tackle any stacking project, and we can offer solutions suitable for both manual and automated handling processes.

- Meat production
- Cheese production
- Freezing and thawing
- Boiling

The complete solution facilitates the handling process with regard to stacking efficiency and safety. New models are often built upon existing constructions.

Sterilizer baskets – pasteurisation

The benefit of using wire and round steel is the unhindered passage of water and the lower weight. Typical loads are 200-400 kg. However, NTF has delivered solutions with load capacities of up to 1200 kg.

Liner baskets are made for the purpose with the possibility of constructions with:

- Drop-down bottom for quick emptying
- Lid
- Side lids for quick emptying
- Wire shelves for product separation

Boiling and pasteurisation

Baskets for pasteurisation are produced with special consideration to fluctuation of temperature, space and handling.

Dripping

This solution ensures an effective drip drying, so that the subsequent labelling can be done in the best way.

Shelved carts for grates and sticks

Sturdy, stable shelved carts in stainless steel for trays and/or smoking sticks. The carts are made according to customer specifications. The selection consists of several models well-suited for processing fish, meat and sausages.

Hygienic design ensures optimal air circulation and more uniform smoking with multiple trays.

Meat hooks, skewers and smoking sticks

Meat hooks and other hanging solutions are specially manufactured according to customer specifications.

- Standard programme of bacon hooks with 2-6 points and S-hooks
- Skewers are made to measure of straightened round steel with pointed ends
- Special solutions for hanging sausages etc.
